

EPA LEAD RENOVATION, REPAIR, & PAINTING (RR&P)

PROGRAM

Are you or your firm involved with renovation, repair or painting work? If so, there is a new EPA regulation that will affect you and/or your firm if painted surfaces will be disturbed during your work.

What are the requirements for this new EPA RR&P certification?

Under the new EPA RR&P Rule, beginning April 22, 2010, contractors, painters, remodeling firms, window installers, maintenance workers, and others performing renovation, repair and painting projects that disturb lead-based paint in homes, apartments, child care facilities, and schools built before 1978 must be certified as a Renovation Firm. Also, firms must have at least one "Certified Renovator" assigned to jobs where lead-based paint is disturbed. There are communication, paint testing, work practices and final cleaning issues that will be new to many.

There are two issues. First, firms must be certified through the EPA. All firms performing or desiring to perform renovation, repair or painting work must become certified by April 22, 2010. Application is made directly with the EPA to become a certified firm. And second, to become a Certified Renovator, an individual must successfully complete the one day Lead Renovator program.

The RR&P rule applies to working in pre-1978 housing and also applies to child-occupied facilities. Child occupied facilities are defined as residential, public or commercial buildings where children under age six are present on a regular basis, such as day care centers and kindergartens. The requirements apply to renovation, repair or painting activities when at least six square feet of lead-based paint is disturbed in a room or more than 20 square feet of lead-based paint is disturbed on the exterior. Window replacement is regulated by RR&P regulations.

What will you learn? The one day program is designed to teach you the basics of what constitutes lead-based paint and how it affects our health. We will look at a variety of details to help you understand and meet the RR&P regulations. And most importantly, how to work safely in housing with lead-based paint and comply with EPA's Renovation, Repair, and Painting (RR&P) Rule, and HUD's Lead Safe Housing Rule.
